

SwarfTech

A Cleaner Manufacturing Future...

SEPTEMBER 2008 NEWSLETTER

THERE'S BEEN SOME BIG CHANGES AT SWARFTECH!

SwarfTech has new owners!

A company restructuring has resulted in some exciting changes for our business.

The company that owned SwarfTech has been split up and SwarfTech is now owned by The Esplin Family (who started the business 12 years ago) and Wayne Carracher.

You will all be familiar with Wayne, who has headed up our sales division for the last 12 years.

We believe this change will bring new energy to our business. We have some great new products to offer and a whole new outlook on our business strategy.

In addition we have a new website. It's easy to navigate and gives a great view of our product range.

Over the next 12 months most of our suppliers will be visiting Australia to meet with our customers.

This means more tailored solutions from the experts.

INTRODUCING ERDWICH

Erdwich Installation at Samsung

Erdwich's full company name is Erdwich Zerkleinerungssysteme GmbH so you will forgive us if we just say Erdwich. No one in our office has quite mastered the full pronunciation but we have had some funny moments trying.

Erdwich is without doubt the best shredding equipment manufacturer in the world. They have been in business for over 30 years and are a family owned and run business.

The Erdwich range consists of single shaft shredders through to extra heavy duty triple shaft units. They also produce Granulators, Cardboard Rippers and Bulk Shredders.

Erdwich and SwarfTech can offer simple single unit solutions through to whole plant design, installation and commissioning. The Erdwich solution is backed by solid experience. They have 18 refrigeration recycling plants in Europe alone.

Recycling Technologies Group Pty Ltd is the name of our new company - but we are continuing to trade as **SwarfTech**. We will be sending out newsletters every two months to keep our business contacts informed of the latest trends and technology. If you don't wish to receive our newsletter please e-mail us and let us know - kari@swarftech.com.au

I only feel angry when I see waste. When I see people throwing away things we could use.
-- Mother Teresa

NATIONAL MANUFACTURERS WEEK

Did you see us at National Manufacturers Week?

We had a number of our machines on display. As always the RUF briquetting machine drew a lot of interest. This year MKR Metzger presented three of their machines. The Trenboy and 350 m-1 Centrifuge unit (which was operating). The other unit on display was the impressive SP500, this machine is an 'all in one' CNC/Milling/Lathe cleaning centre. It vacuums, high pressure cleans, filters and then returns clean cutting oils and emulsions back to manufacturing. The SP500 will even clean factory floors.

We also welcomed Sergio Distefano from Imabe Spain to our stand. Sergio provided our clients with great information on the range of Imabe equipment.

GOVERNMENT GRANTS FOR ENVIRONMENTAL RESPONSIBILITY.

Like to get some assistance when you purchase recycling equipment? Well there may just be help out there ... somewhere!

The Rudd Government has introduced a range of grants for industry to gear themselves up for environmental responsibility. This is a part of the \$240 million Clean Business Australia initiative.

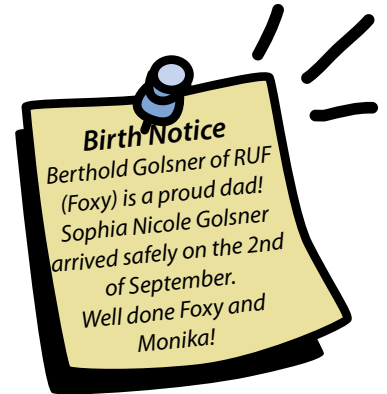

One of the three elements to this program is Retooling for Climate Change. This Grant can provide you

with financial compensation for investment in equipment that reduces your environmental footprint.

There is lots of information we still don't know as the various departments are still finalising the fine print but a call to your Federal Member or some research on the net through AusIndustry will provide a good starting point.

We will keep you informed as more details come to hand. But at this early stage we believe there are some great

possibilities for our customers to get assistance when they decide to take initiative to save the environment.

Check out the range of MKR equipment for CNC Cleaning, Coolant and Oil recycling and water recycling solutions.

**They are ingenious!

DOES YOUR WASTE HAVE WHAT IT TAKES? TAKE THE TEST!

There is no use wasting time researching waste solutions if your waste cannot be processed or if your volumes don't justify the expense.

The easy way to establish this is by allowing us to put your waste through our testing facility in Sunbury in Victoria.

Travis Miatke is our Technical Services Coordinator and he can provide you with a conclusive report on how your waste problems can be solved. In some cases we can arrange for your waste to be sent to our suppliers for more intensive tests.

The end result is peace of mind that your solution will work.
